

- **3 YEAR WARRANTY** with registration.
- **MADE 100% IN ITALY**
- **DOUBLE ACTING AIR ASCEND & AIR DESCEND:**
YAK's venturi valve setup keeps compressed air out of the hydraulic cylinder, ensuring long-lasting performance.
- **EASIEST JACK TO SERVICE:**
Quick maintenance with an easy to remove air motor, so you don't need to return the whole jack.
- **BRASS AIR MOTORS:**
Brass components enhance efficiency over time, unlike aluminum or steel.
- **PATENTED EXHAUST DESIGN:**
Effortlessly expels dirt and debris, with a replaceable or cleanable exhaust filter. Equipped with high-grade graphite seals, o-rings, and u-cups.

In the context of lifting with a jack, it is essential to ensure that the jack's lifting capacity is compatible with the specified weight unit. For instance, a jack rated for 20 USA tons can lift up to 40,000 pounds, while a jack rated for 20 metric tonnes can lift up to 44,092 pounds. Verifying the unit of measurement is critical to avoid overloading and to ensure safe operation.

All **ESCO** jacks are meticulously engineered for efficient lifting and lowering of heavy loads. It is recommended to use **support stands or cribbing** with appropriate tonnage capacity to ensure maximum safety and stability.
