

INFLATION SAFETY SOLUTIONS

ULTIMATE PRECISION

The **ESCO HURRICANE & CYCLONE** series deliver the industry's most concentrated burst of air. Designed and engineered by the original inventor and grandfather to the bead seating market.

POWERFUL DESIGN

Fast and concentrated air bursts from the **HURRICANE** or **CYCLONE/X-Series**, as powerful as hurricane winds, ensure quick and efficient tire bead seating.

BUILT TO LAST

Crafted with state-of-the-art techniques for superior functionality and longevity. Perfect for professional tire shops and DIY projects.

EFFORTLESS EFFICIENCY

LIGHTWEIGHT ALUMINUM balanced tanks make tire bead seating easy and safe, minimizing the risk of tire damage or accidents.

THE IMPORTANCE OF A BEAD SEATER

Using a bead seater ensures a secure and airtight fit of tire beads onto rims. These tools deliver a powerful burst of air, accurately positioning the tire beads and preventing air leaks, tire slippage, and uneven wear. The **HURRICANE** and **CYCLONE SERIES** enhance safety, performance, and installation speed, providing tire technicians with a reliable tool for achieving optimal results with minimal risk.

Bead seaters are **LOUD**. It is not uncommon for the sound to reach levels of **100 DECIBELS (DB) OR MORE** at close range.

It is always recommended to wear the appropriate safety equipment while operating these bead seating tanks or any tools or equipment from **ESCO**.
